

Panda Cloud Antivirus Achieves Advanced+ Rating in its First Participation in AV-Comparatives Tests

- Panda Cloud Antivirus achieved better results than other free antivirus software like Avast or AVG, and even paid solutions like Symantec, Kaspersky, Trend Micro, ESET, McAfee and others.

Madrid, September 29

[Panda Cloud Antivirus](#), the first cloud-based antivirus, has achieved the **Advanced+** rating in the latest on-demand malware detection testing carried out by the independent review lab [AV-Comparatives.org](#). This is the first time that Panda Cloud Antivirus participates in the AV-Comparatives tests and the results could not have been better.

The test, which compared 20 free and paid antivirus programs, showcased the high detection capabilities of Panda Security's product. Version 1.5.1 of Panda Cloud Antivirus successfully detected 99.3 percent of the more than 200,000 samples used by AV-Comparatives. The results of the tests reinforce the powerful protection capabilities of Panda Cloud Antivirus.

The AV-Comparatives tests also included a false positive detection report. Panda incorrectly detected only one clean file as malware, whereas other free antivirus solutions like Avast or Avira had 10 or more false positives, and AVG and Symantec reported 51 and 57 false positives respectively.
